

All for 3's Toddler Intervention Programs

Our All for 3's toddler social skills program offers an opportunity for young children with social or language delays to learn skills in a more natural setting and to generalize their skills with a maximum amount of adult support. The toddler social skills program is taught through a variety of child centered approaches and activities. These may include modeling, repetitions, sign language, gestures and incidental teaching. The clinicians use play and reinforcement to maintain the interest and motivation of the children throughout the session. We host 2 Toddler Social Skills Groups:

Puffins Group Curriculum

Talking Time

- Language and communication
